Etymology and taxonomy. The use of the common names "frog" and "toad" has no taxonomic justification. From a classification perspective, all members of the order Anura are frogs, but only members of the family Bufonidae are considered "true toads". The use of the term "frog" in common names usually refers to species that are aquatic or semi-aquatic and have smooth, moist skins; the term "toad ...

You should definitely avoid touching frogs or toads, some of which secrete powerful toxins from their skin. But if the poison doesn't kill you, you're not going to have to worry about getting warts. In fact, the bumps that cover some frogs and toads aren't warts at all, and even if they were, warts can only be caused by a human virus.
