In mathematics, a differentiable manifold (also differential manifold) is a type of manifold that is locally similar enough to a linear space to allow one to do calculus. Any manifold can be described by a collection of charts, also known as an atlas. One may then apply ideas from calculus while working within the individual charts, since each chart lies within a linear space to which the usual ...

A similar problem faces causal set theory in the form of the ‘ inverse problem ’ , which roughly amounts to the difficulty of getting continuous manifolds (with their corresponding symmetries) from a fundamentally discrete theory (see Wallden, 2010, for a good recent review of causal sets, including a discussion of this problem, on which ...

Ein Torus kann auch durch Identifizieren der Seiten eines Parallelogramms konstruiert werden. Dabei wird die rechte Kante des Parallelogramms mit seiner linken Kante und die obere mit der unteren Kante verheftet. Diese Topologie benutzen auch viele Computerspiele: Verlässt ein Spielobjekt auf einer Seite das Spielfeld, so taucht es auf der gegenüberliegenden Seite wieder auf.
